

BETTER HEALTH.

Cell Cure Diagnostics offers
Unique Wellness Diagnostics Test's
Which analyse's the Root Cause of
Disease and symptoms. We envision ourselves as
Promoters of Mission Healthy Human Body.

**We Address Health Problems By Means of Innovative Concepts.
They Combine Special Diagnostics
With Individualized Food and Services To Improve
Wellbeing & Quality of life.**

Wellbeing

**A HEALTHY MIND IN
A HEALTHY BODY.
WE WANT YOU TO
BE TOTALLY
COMFORTABLE BY
GIVING YOUR BODY
EXACTLY WHAT IT
NEEDS.**

Prevention

**YOU ARE WHAT YOU
EAT: WE WANT YOU
TO STAY HEALTHY
BY ADDRESSING
HIDDEN AND YET
UNKNOWN
PROBLEMS.**

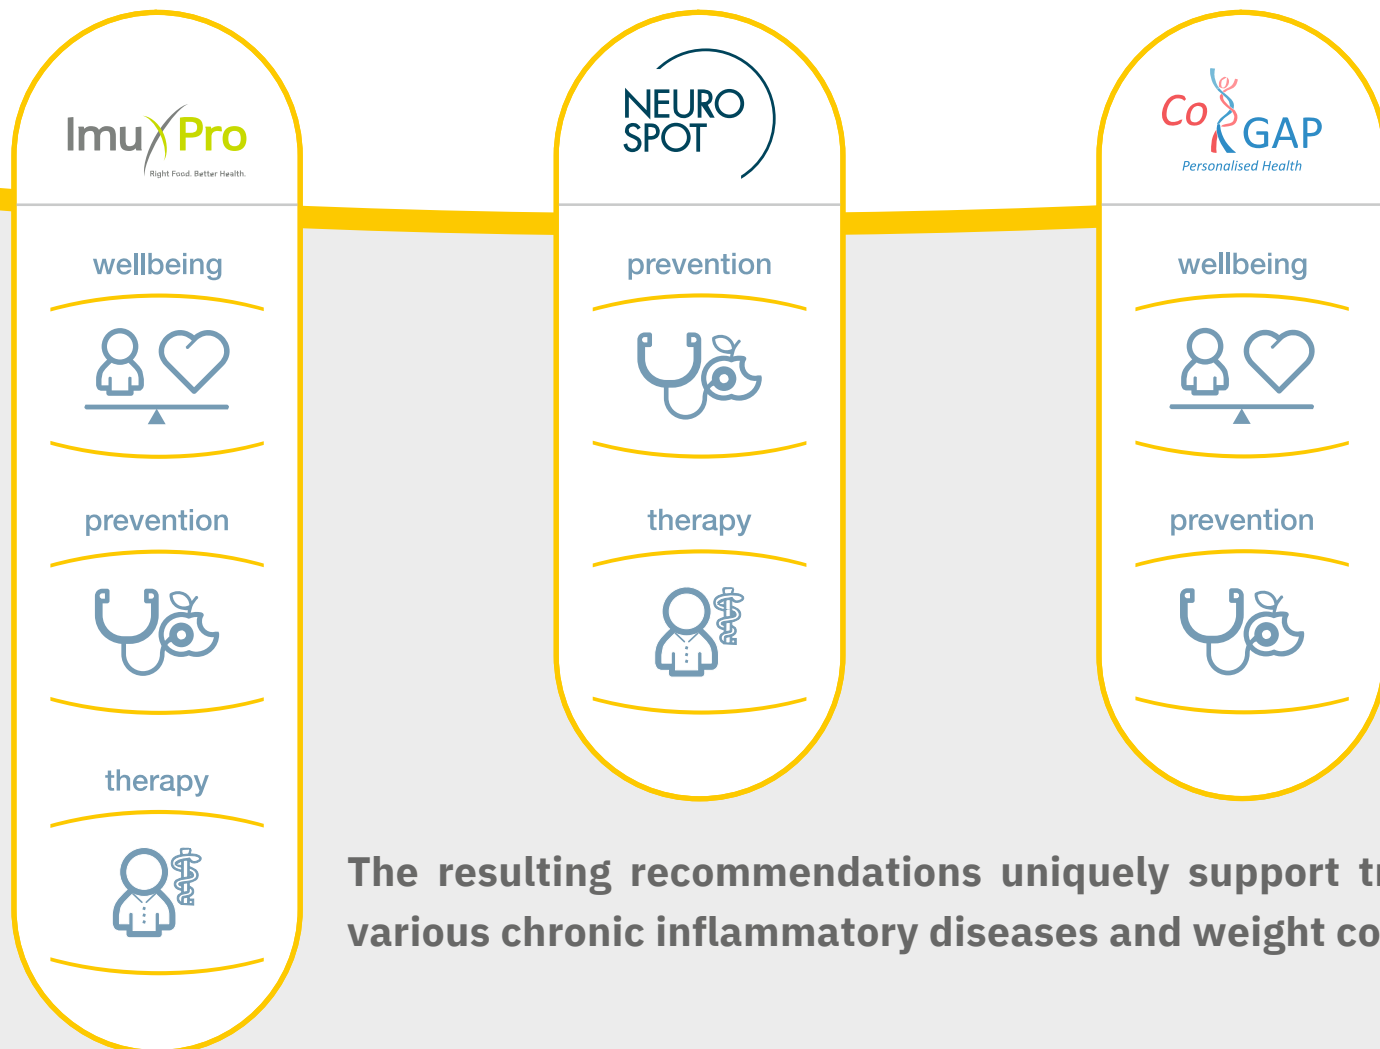

Therapy

**DECREASING
INFLAMMATORY
IMPACT MAY
SUPPORT A
MULTITUDE OF
THERAPEUTIC
APPROACHES.**

Our Tests Examine:

- Food hypersensitivity (IgG)
- Individual Genetic types of metabolism of macronutrients
- Stress Messengers (hormones and neurotransmitters)

The resulting recommendations uniquely support treatments of various chronic inflammatory diseases and weight control.

Our special diagnostics, customized programs and services are personalized and optimally modeled to promote individual prevention, therapy, and wellbeing.

Nutrition Care Germany is a division of R-Biopharm AG, a leading developer of test solutions for clinical diagnostics and food & feed analysis. The diagnostics of R-Biopharm AG have been certified according to the international standards ISO 9001 and ISO 13485. All tests are validated, CE-marked according to IVDD and used globally by accredited testing laboratories.

**RIGHT FOOD .
BETTER HEALTH.**

**DIAGNOSIS & TREATMENT
OF IgG FOOD ALLERGIES
AS INDIVIDUAL AS YOUR PATIENTS SYMPTOMS**

IgG FOOD ALLERGIES

IgG food allergies (type III) are causing more and more health challenges. Such IgG-mediated allergies often remain undetected because the symptoms only occur a few hours or even days after the consumption of a “trigger food”, making them **extremely difficult to identify**.

Fortunately, a **reliable diagnostic test and nutritional concept can help: ImuPro**. With ImuPro, you will find out whether or not an IgG food allergy could be the cause of your patients chronic complaints.

How does an IgG food allergy develop?

With type III food allergies, the immune system reacts to harmless food allergens and produces specific IgG antibodies. Due to medicines, infections, mycosis, stress and environmental poisons, the integrity of the intestinal wall can be damaged and food components can slip between the intestinal cells. In some cases this triggers an immune response and the immune system starts to produce specific IgG antibodies against them.

These antibodies and the food antigens form immune complexes which can adhere to organs and tissues. When the immune complexes are destroyed by phagocytic cells and the complement system, the surrounding tissues can be damaged. This leads to **low-grade inflammatory conditions**, which can become chronic. The symptoms are delayed.

POSSIBLE SYMPTOMS

Gastrointestinal Complaints

- Bloating
- Constipation
- Crohn's disease
- Diarrhoea
- Irritable Bowel Syndrome (IBS)
- Nausea

Chronic Pain

- Headaches
- Migraines

Excess Weight

- Chronic weight problems
- Obesity

Skin Problems

- Atopic dermatitis-like skin problems
- Eczema
- Psoriasis

POSSIBLE SYMPTOMS

THE IMUPRO CONCEPT

ImuPro is a concept that combines a **sophisticated and reliable blood analysis** for IgG food allergies with **unique post-test guidance**.

ImuPro is an IgG based food intolerance test. Our Test meticulously examines IgG-linked Food Allergies, revealing specific proteins that might trigger an immune response. The Food Intolerance Test focuses on milk, wheat, yeast fruits, vegetables and all the other foods which we eat in our day to day life that can challenge digestion, thus offering insights into potential discomforts. IgG Delayed Food Allergy Test delves even further, unveiling delayed immune reactions to foods. With ImuPro's tests, you can gain a holistic understanding of how your body interacts with different foods, enabling you to make informed dietary choices for improved well-being.

BUILDING BLOCKS TO A HEALTHIER LIFE:

- Elaborate and reliable IgG test
- Individual dietary recommendations
- Tasty personalised recipes
- Handy rotation and provocation plan
- Helpful wallet card with the patient's possible trigger foods
- Practical tips for everyday life
- Professional scientific and nutritional advice

- **Sophisticated Blood Analysis**
- **Wide Range of Testing**
- **Weight Management**
- **Digestive Harmony**

- **Personalized Post-Test Guidance**
- **Enhanced Energy and Well-being**
- **Inflammation Reduction**

THE DIAGNOSTICS

The **ImuPro test** is performed by a highly professional and specialised in-vitro diagnostic laboratory. The lab analyses the patient's sample and determines the presence of specific IgG antibodies to a broad variety of foodstuffs in the patient's blood. The test is carried out using the **E**nzyme **L**inked **I**mmunoSorbent **A**ssay (ELISA) test method, a very reliable standard procedure in laboratory analysis.

Based on the results of the antibody titre, the foodstuffs are categorised into three groups: “not elevated”, “elevated” and “highly elevated”. The lab provides you and your patient with **test results** and **personal nutritional guidelines**.

Procedure

Physician-patient consultation:

Is it likely to be an IgG food allergy?

Blood withdrawal and shipment:

You take the patient's sample and send it to the laboratory.

Laboratory analysis and evaluation:

The sample is analysed in the specialised lab using the ELISA technique.

Sending of results and nutritional guidelines:

Within a short time, you receive test results and comprehensive documents for the patient.

Physician-patient consultation:

You discuss the results with your patient and advise them regarding their dietary changes.

ImuPro is a trusted German product. The diagnostics of R-Biopharm's quality management systems have been certified according to the international standard ISO 9001 and ISO 13485.

All tests are validated, CE-marked according to IVDD and used by accredited testing laboratories.

THE IMUPRO OPTIONS

CHOOSE FROM THE WIDE RANGE OF TESTS AND ASSESSMENTS BY IMUPRO

Get an expert diagnostic test followed by a comprehensive solution accompanied by personalised guidance.

Identify the Issues and Get Personalised solutions.

Through a reliable analysis of your blood, ImuPro identifies food allergies and other underlying issues with your intake. The comprehensive test covers up to 270 food items.

Consequently, our experts design a customised diet solution for you and provide you with a post-test counsel.

Hema Malini

Dear Mr. Neeraj,

I would like to express my gratitude to you for supporting and guiding me in following the Protocols of ImuPro Test.

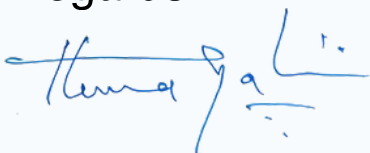

It has been years since I have endured occasional severe pain in my arms and fingers. I have tried several treatments and medications for the same but nothing worked. On my daughter's advice, I got my ImuPro Test done. ImuPro is based on a finding by the German Laboratory involving Diagnostics test for IgG Delayed Food Allergies.

The ImuPro test helped detect that I was allergic to certain foods and also to ascertain the foods that I should eat and those I should avoid. It took me 5 weeks to induct these changes in my diet. Soon it became a habit and I was cautious of the ingredients in everything I ate. I was able to discover several alternatives to the regular ingredients and the transition was easy and quick. I felt better over a period of time and the pain I was going through soon settled.

Today I am free of the discomfort in my joints and fingers and I continue to follow the same changes even though I am free to go back to the old routine.

'You are what you eat, not all foods can be well tolerated by every Human Being.' Now I believe in this statement more than ever. After my positive experience with ImuPro, I recommend blood test to anyone who has been undergoing such pain.

Regards

Hema Malini

GALLERY

Aashita Luthra

In June 22 we noticed rashes on our 7 year old son's skin. We thought it could be due to chlorine as he was taking swimming classes, so we simply used anti fungal ointment but there was no relief. Then our family doctor told it was Psoriasis, we immediately started the treatment but the flares were just increasing and spreading. Someone in family then advised us to take a food allergy test and that is when we came across ImuPro test and connected with Mr. Neeraj. He guided on the full process for test and we got the test results in 2 weeks. Taking the test was really helpful, as we got to know that our son was intolerant to gluten, dairy and eggs. The next day of the report Mr. Neeraj conducted a counselling session and guided us on the food to be given to him and how it should be given, we started the same next day. Today it's almost 20-25 days of us following that diet and we can see beginning signs of improvement and that motivates us further to stick to the schedule as advised by him. What we appreciate most is that Mr. Neeraj responds immediately on Watsapp on each and every query of ours. Thank him a lot for his support and guidance.

Your DNA.
Your Diet.

CoGAP MetaCheck[®] Analysis results

Introduction

The secret lies in your genes

Humans have evolved to adapt to various lifestyles and dietary needs, and their genes have altered their metabolism to do so. The metabolism's effectiveness in processing macronutrient (carbohydrates, proteins, and fats) as well as your caloric intake during various sporting activities might be impacted by minor variations in the DNA, known as polymorphisms, that differ between persons. The word nutritional genetics (nutrigenetic) is also used in this sense. Four forms of genetic metabolism have been identified by CoGAP® (Meta-types).

These genetic variances make sure, among other things, that every person processes food differently. Every time you come across friends or family that are leaner or stronger, you may relate to this conclusion from your own experience.

The concept of the gene diet

These genetic variants serve as the starting point for the CoGAP[®] metabolic study. The objective is not just any generic diet; rather, it should take into account your unique Meta-type as identified by CoGAP[®] and provide support through expert nutrition and exercise advice.

The CoGAP MetaCheck[®] is a genetic metabolic analysis that identifies the Meta-type and its effects in persons who are seeking help. By identifying the Meta-types, you may provide cutting-edge dietary and exercise guidance as a MetaCheck consultant. Retrospective investigations have already been carried out in the United States and at the German Sport university of Cologne's Center for Health. Clinical research has not yet confirmed the relationship between genetic predisposition and weight change satisfactorily. CoGAP is sure, though, that a diet that takes into account the genetic traits of the person seeking guidance can produce better outcomes than a diet that disregards these physiological traits.

Weight reduction (kg) in 12 months

Modified according to: see [1]

BMI reduction in 6 – 9 months

Modified according to: see [2]

The different Meta-Types

CoGAP distinguishes four Meta-Types: **Alpha (α)**, **Beta (β)**, **Gamma (γ)** and **Delta (δ)** . In principle, each one of these Meta-Types processes the macronutrients in food differently.

In addition, CoGAP assigns each Meta-Type one of the two exercise variants, namely **E for „Endurance“** or **S for „Speed“**. According to CoGAP, these exercise variants can result in different calorie consumption rates depending on the type of activity.

Procedure

Consultation and taking of a sample
(cheek swab)

Sending the sample to the lab

Analysis and delivery of the results

Follow-up consultation

Distribution of CoGAP meta types

In a 2017 study, the Fresenius University of Applied Sciences and the Center of Genetic Analysis and Prognosis examined the distribution of the CoGAP meta-type in the European population [1]. In order to achieve the highest significance for the study, the anonymised data of 16,641 randomly selected MetaCheck results from different European regions were used. The results show that the four different meta types of alpha, beta, gamma and delta are relatively evenly distributed among the population (Fig. I), while there are clear differences in the sports types E and S (Fig. II). Figure III shows the distribution of different meta and sports type combinations.

Fig. I

Fig. II

Fig. III

The analysis result

- ✓ Simple and clear presentation for those seeking advice
- ✓ Individual nutrition and training recommendations considering personal goals and characteristics (gender, age, height and weight)
- ✓ Nutrition list
- ✓ Access to the CoGAP nutrition portal
- ✓ 5 other important weight loss factors such as the yo-yo effect, muscle mass loss, hunger, satiety, and visceral adipose tissue

The MetaCheck App

The exclusive online portal MetaCheck-Portal.de is optimized for smartphones and can be used comfortably on the mobile phone or tablet like a web-based app.

The following functions are available:

- Creation of individual nutrition plans
- Meta-Type appropriate recipes with labeling of allergens, vegan and vegetarian dishes
- Individual tips for changing your diet
- Tracking of body values
- Creation of a drinking log
- Meta-Type food list (with filter function red-yellow-green)
- Interactive grocery shopping list from the food list
- Sports exercises for your sports type including recommendations for EMS training
- List of successes - including some surprises as a reward

Advantages of the CoGAP MetaCheck® concept

For you as a doctor

- Picture gain (modern, innovative) for each person
- Persistent dedication
- A cutting-edge service
- Simple management of testing
- A personalised dietary plan has a high adoption rate (45%)(3) without charge

For those who want guidance

- Guidelines for diet and exercise that are customised
- Variations in diet throughout time
- Notion of weight loss based on a single genetic test
- Enough is a simple cheek swab sample.
- The CoGAP® nutrition site is available

SAMPLE REPORT

Meta-Type specific food-list

Based on your meta type **Alpha** you will find in the following tables different foods, which are color-coded according to their potential for weight loss.

Most suitable
Suitable
Poorly suitable

Cereal(-products) and pseudocereals	
Baked goods	
Baguette	Poorly suitable
Black bread (whole grain)/"Pumpernickel"	Most suitable
Bread, whole grain (all types of cereals)	Most suitable
Crispbread	Poorly suitable
Crispbread, whole grain	Most suitable

Rusk, without egg, whole grain	Suitable
Rye bread, sourdough	Suitable
Toast, wheat	Poorly suitable
Toast, whole grain	Suitable
White bread	Poorly suitable
Breakfast cereals	
Flakes	

SAMPLE REPORT

Your sport variant

Factor	Effect	Speed	Endurance
Exercise	Endurance		<div></div>

You have the **sport type E**. This means that you will have a more effective and therefore higher calorie consumption in all endurance-based sports

(such as jogging, Nordic walking, swimming and rowing) than in speed strength-based sports.

Make the most of your genetic disposition and prioritize your training with endurance-based sports. For a 60-minute training plan, we recommend a distribution of endurance sports to speed and strength-based sports as depicted in the diagram below.

Nevertheless, any form of regular exercise is suitable for increasing your basal metabolic rate in the long term. If you are able to cope better with speed-strength training, it is advisable for you to integrate this more strongly into your training plan, instead of doing without sport altogether.

In addition, you should always ensure that the training is appropriate for your circumstances and does not lead to health issues, such as joint problems caused by excessive strain. Therefore, your training plan will be developed together with your trainer according to your personal needs, wishes and goals.

Battery drained?

NeuroSpot – Your path to new energy

Are you stressed out?
Exhausted?

A simple lab test will show you how much juice is still left in
your battery - and how you can recharge it.

BATTERY DRAINED?

EXHAUSTED?

Are you stressed out?

Are you under stress? Everyone has experienced stress at some point. The phrase "stress" is frequently used interchangeably with "extremely busy" or "I don't have any time right now." This condition often lasts only a brief period of time. If the body is given enough time to recover thereafter, there are no negative effects. The temporary state of alert our bodies feel, however, could grow into a chronic state of alarm if this state persists and is even emphasised by additional stress causes.

Chronic stress does not have a single source or symptom. It is virtually always a unique combination of several circumstances.

THE MOST COMMON SYMPTOMS

If the body is stressed that means that it is in **high alert**. If this **chronic stress** lasts for a longer period of time, a perpetual high alert level is generated, that can cause a multitude of symptoms.

INDIVIDUAL MIX OF CAUSES

Chronic stress can have
different causes:

Acute and chronic infections:

- »Frequent colds
- »Recurring urinary tract infections

Physical overexertion:

- »On the job - long work days
- »Sports - excessive ambition /
training that is „too strenuous“

Environmental impacts:

- »Noise
- »Darkness
- »Environmental poisons

Physical:

- »Pain
- »Heat or cold
- »Night work / shift work

Emotional:

- »Unresolved conflicts
- »Anxiety
- »Deadline pressure
- »Loss of a loved one

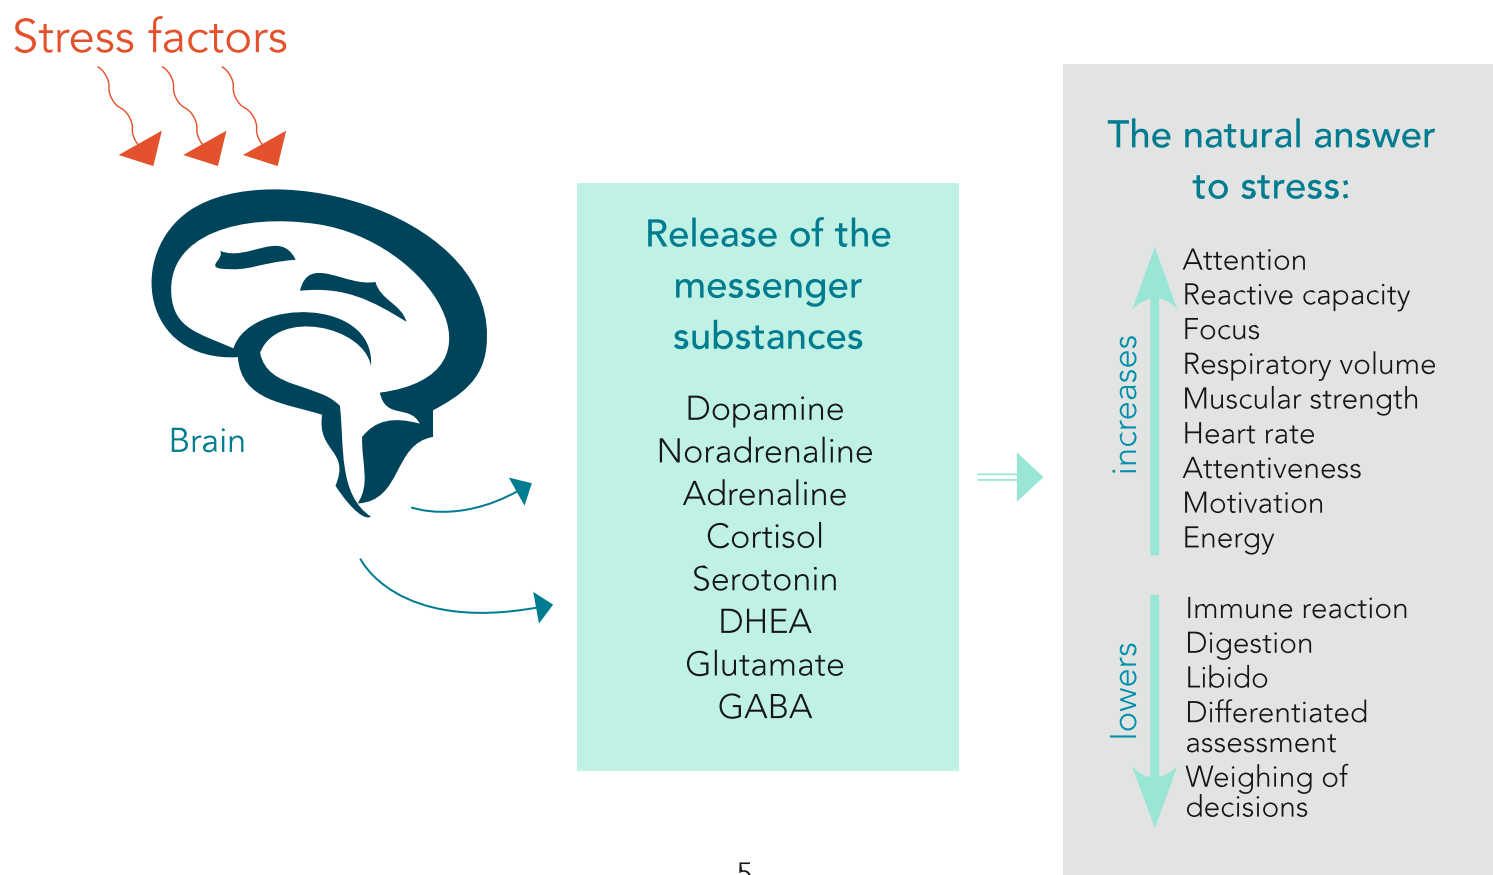

WHICH REACTION CAUSES STRESS IN YOUR BODY?

The brain initiates the biochemical and physical stress mechanisms. As a result, many of those affected experience the sensation that something isn't quite right in their head. It is simply a matter of the body's operational readiness and the continuous release of messenger substances such as adrenaline, noradrenaline, serotonin, and cortisol that was generated.

The good news is that the presence of these messenger substances in the body can be determined with a simple urine and saliva test (NeuroSpot). With the results of the two tests, the balance can be restored.

The messenger substance building blocks must be absorbed along with the food. As a result, an individually tailored healthy diet and naturopathic treatment can be a successful treatment.

STRESS-O-METER

The Stress-O-Meter gives you an initial indication of how much juice is left in your battery. A subsequent NeuroSpot test, which consists of a simple urine and saliva test, shows you how to recharge your battery.

The Stress-O-Meter is only intended to assist you in determining your stress level. The outcome is only an indication and should not be used to replace a medical diagnosis.

I get anxious quickly when even a small matter does not go the way I envisioned.	<input type="checkbox"/>	<input type="checkbox"/>

THE NEUROSPOT TEST – YOUR PATH TO NEW ENERGY

With just one urine and saliva test, the NeuroSpot tests allow you to identify the amount of stress your body is currently under. Your body is checked for the key stress hormones and the involved messenger chemicals.

You may do the test quite quickly, even at home, thanks to the proprietary DrySpot technology. Ask your therapist which version of NeuroSpotBasis or NeuroSpotPlus is ideal for you during a private conversation.

NeuroSpotPlus

The NeuroSpot tests examine the following stress hormones and messenger substances:

Serotonin	– mood messenger / happiness hormone
Dopamine	– boosts concentration and motivation
Noradrenaline	– steering mental alertness
Adrenaline	– performance and stress hormone
GABA	– the body's natural sedative
Glutamate	– natural stimulant and brain detoxifier
DHEA	– youth hormone
Cortisol	– activity and stress hormone

THE STRESS COCKTAIL – AN OVERVIEW OF THE STRESS HORMONES AND MESSENGER SUBSTANCES

SEROTONIN mood messenger / happiness hormone

The brain's major messenger chemical, serotonin, popularly known as the "happy hormone," is produced mostly in the central nervous system.

Our emotions are mostly controlled by serotonin. It improves mood and regulates motivation by working with adrenaline and dopamine. Moreover, it has a calming, sleep-inducing, and anti-depressant impact. Moreover, it has a role in controlling pain sensitivity and the sensation of satiety. Serotonin also affects vital gastrointestinal processes, including the absorption of nutrients through the intestines.

Lack of serotonin:

- » Anxiety
- » Lack of drive
- » Depression
- » Increased sensitivity to pain
- » Exhaustion
- » Eating disorders with weight gain
- » Fibromyalgia
- » Difficulty concentrating
- » Migraine
- » Difficulty sleeping
- » Disquiet / nervousness
- » Dyspepsia

Excess of serotonin:

- » Very rarely

DOPAMINE boosts concentration and motivation

At the forefront of mental prowess, dopamine plays a pivotal role in bolstering mental performance and fostering unwavering focus. Its influence extends beyond mere concentration, reaching into the domains of mobility, memory, and learning, where it acts as a master conductor orchestrating the harmonious interplay of neural circuits. This neurotransmitter stands as a sentinel of cognitive vitality, ensuring the optimal functioning of faculties essential for navigating the complexities of thought and information processing.

Lack of dopamine:

- » Lack of drive
- » Movement disorders
- » Depression
- » Eating disorders (attacks of ravenous hunger)
- » Difficulty concentrating
- » Parkinson's disease
- » Loss of motivation
- » Muscle weakness
- » Addiction problems
- » Daytime fatigue
- » Forgetfulness
- » Diminished libido

Excess of dopamine:

- » Problems concentrating
- » Mental illnesses (schizophrenia)
- » Restlessness
- » Difficulty sleeping
- » Daytime fatigue
- » Inability to recover
- » Dyspepsia

NORADRENALINE steering mental alertness

Noradrenaline has the effect of increasing blood pressure, attention, alertness, concentration, willingness to perform, motivation and motor functions. It is also involved in the control of a multitude of hormones.

Lack of noradrenaline:

- » Lack of drive
- » Lack of energy
- » Impaired sensitivity to pain
- » Difficulty concentrating
- » Depressive state

Excess of noradrenaline:

- » Symptoms of anxiety
- » High blood pressure
- » Hyperactivity

ADRENALINE performance and stress hormone

Adrenaline enables the body to react to increased demands. It increases the respiratory volume, blood pressure and the heart rate, thus providing the body with more oxygen; it increases attentiveness and the general mental activity, motivation and willingness to perform.

In addition, it increases the metabolic activity and ensures that very quickly the muscles and the brain have more energy available.

On the other hand, it inhibits digestion and sexual activity.

Lack of adrenaline:

- » Fatigue with strong urge to sleep, all the way to extreme exhaustion
- » Lack of drive
- » Depressive state
- » Cardiac arrhythmia
- » Difficulty concentrating
- » Blood pressure is too low
- » Difficulties in losing weight

Excess of adrenaline:

- » Difficulty sleeping
- » Disquiet
- » Anxiety

GABA the body's natural sedative

At the heart of GABA's influence lies its profound impact on the stress response. As a calming force within the neural landscape, GABA exerts a regulatory influence on stress hormones, curating a tranquilizing effect that reverberates throughout the body and mind. This intrinsic ability to induce relaxation positions GABA as a natural antidote to the tumultuous waves of stress, offering respite in the face of life's challenges.

Lack of GABA:

- » Anxiety
- » High blood pressure
- » Chronic pain
- » Depression
- » Epilepsy
- » Sugar cravings
- » Racing heart
- » Muscular tensions
- » Night sweat
- » PMS
- » Restlessness
- » Numbness
- » Tinnitus
- » Difficulty sleeping
- » Forgetfulness

Excess of GABA

An elevated level of GABA occurs mostly as a counteracting agent when other messenger substances are activated in excess, as is the case during chronic stress. This is how the body attempts to balance the effects of the elevated stress hormones or to at least dampen them.

GLUTAMATE natural stimulant and brain detoxifier

Several foods contain glutamate, which enhances their flavour. It is also frequently employed as a flavour enhancer in commercially prepared meals and spices, where it is utilised in dosages that are several times higher than in naturally occurring foods. The glutamate absorbed with food does not, however, make it to the brain.

The messenger substance in the brain made of glucose and glutamic acid is what we are discussing below rather than glutamate found in food. In the brain, glutamate serves a variety of critical roles. It is crucial for the brain's demanding functions, such learning and memory, for intentional, controlled motions, as well as for the brain's capacity to sense the environment and adapt to it. Furthermore, glutamate takes part in metabolic processes that rid the brain of potentially harmful ammonia.

Lack of glutamate:

- » Fatigue and exhaustion
- » Schizophrenia
- » Perceptual disturbances

Excess of glutamate:

- » Anxiety
- » Brain cell degradation
- » Epilepsy
- » Hyperactivity
- » Cramps
- » Parkinson's disease and other dementia illnesses
- » Depressive state
- » Disquiet

DHEA Youth hormone

The "Anti-Aging hormone" is another name for DHEA. Cholesterol is used to make DHEA, mostly in the adrenal gland. From the age of 25 on, DHEA production gradually diminishes as we age. Which is why it is so accurate to estimate a person's biological age from their DHEA level. In addition, DHEA serves as a precursor for the sex hormones oestrogen and testosterone. Directly opposing cortisol, DHEA balances the stress response brought on by cortisol and aids in coping with stress.

Lack of DHEA:

- » Diminished ability to deal with stress
- » Enhances the effect of cortisol
- » Malaises
- » Depression
- » Learning difficulties
- » Forgetfulness
- » Lack of sex hormones
- » Menopause/andropause complaints

Excess of DHEA:

- » No negative symptoms

CORTISOL Activity and stress hormone

The stress hormone cortisol, akin to a vigilant conductor in the body's orchestra, orchestrates a comprehensive response to external stimuli, wielding a profound influence on various physiological processes. One of the key functions that distinguishes cortisol is its remarkable capacity to modulate metabolism and unlock stored energy reserves, marking it as a central player in the body's adaptive mechanisms.

Lack of cortisol:

- » Problems concentrating
- » Lack of energy
- » Addison's disease
- » Passivity and apathy
- » Difficulty to get up in the morning and become really awake
- » Constant fatigue, despite sufficient sleep
- » Forgetfulness
- » Sugar cravings
- » Diminished ability to deal with acute stress

Excess of cortisol:

- » Tenseness
- » High blood pressure
- » Increased cholesterol levels
- » Susceptibility to infection
- » Difficulty sleeping
- » Disorder of the metabolism with over-weight
- » Increased belly fat

- **Strengths & Weaknesses**
- **Personalized recommendations**

What is the **link** between our **Gut Microbiome**, **Leaky Gut** and **Delayed Food Allergies**

The gut hosts trillions of beneficial microorganisms that play a crucial role in digestion, metabolism, and immune function.

A **Healthy Gut** is free from chronic digestive conditions like irritable bowel syndrome (IBS), inflammatory bowel disease (IBD), or gastroesophageal reflux disease (GERD).

“**A balanced microbiome is essential for gut health.**”

Leaky gut has long been linked to numerous diseases and illnesses related to food allergies and hypersensitivities. More and more attention is presently given to gut microbiota.

The decryption of the microbiome has opened new insights into this complex network of microorganisms living in symbiosis with the host and being an existential importance for overall human health.

If one is eating either processed food regularly or contaminated food's or Foods laden with Preservatives on a daily basis, the count of Bad bacteria increases and the count of Good bacteria decreases.

**“
It affects the
gut health and
increases food
sensitivities.
”**

Also, with improper defecation, the waste remains in our intestines. It produces bad bacteria that weaken our immune system and we may suffer from Stomach Related chronic issues and a host of other ailments.

Recent studies have also pointed out the importance of certain bacteria for the immune response, particularly inflammation, and oral tolerance, but also to self-tolerance.

GUT MICROBIOME TEST

First, an assessment of the present flora is performed. The microbiota is responsible for most of the anti-inflammatory actions and production of short-chain fatty acids that are essential for the gut mucosa. Depending on the outcome, specific measures can be initiated.

*with hand holding and guidance is
done to ensure compliance.*

Cell Cure Diagnostics holistic
approach is
designed to optimize your well-
being by addressing the root
causes of health issues and Thus
improve your overall ***well being.***

How It's Different

At Cell Cure Diagnostics, helping you achieve disease free life and better health is ensured through a combination of advanced diagnostic tests, expert analysis, and personalized counselling .

Our Parent organisation which is in Germany has extensive experience and expertise in interpreting complex health researches and analysis , allowing them to identify subtle patterns and imbalances.

The laboratory in Germany utilizes state-of-the-art testing methods and technologies, minimizing the margin for error.

Additionally,our commitment to ongoing monitoring and follow-up hand holding and guidance ensures that your health remains at optimum level and effective as we suggest necessary adjustments based on your progress.

We prioritize precision and reliability in every step of our process, aiming to provide you with the most advanced and tailored health insights and dietary recommendations.

How It's Customized

Cell Cure Diagnostics introduced ImuPro, a well-established brand in the field of IgG Delayed Food Testing, to India in 2014. The objective was to offer a reliable diagnostic test for medical practitioners, nutritionists, dieticians, and wellness clinics to help detect problematic foods, advise personalised diet adjustments, and improve their medical practice through proper diet and counselling.

IgG food allergies are frequently misdiagnosed because symptoms appear after a few hours or days after consuming a trigger food. This makes them tough to recognise. ImuPro patients on the other hand, can benefit from a dependable diagnostic test and a personalised nutritional guidance.

Since then, Cell Cure Diagnostics has led to a better transformation in patients' health by scientifically analysing blood samples and suggesting a change in diet as per the ImuPro test results. The company also offers support, counselling, and alternative eating options.

R-Biopharm is a well-known reputable German product and one of the world's industry leaders in IgG Food Allergy Testing. R-Biopharm, a prominent producer of test solutions for clinical diagnostics and food and feed analysis, created the ImuPro test.

ImuPro IgG Food Allergy Testing has been on the market in Germany since 2000 and is now available in over 50 countries. In 2015 alone, over 60,000 tests were performed with R-Biopharm's RIDASCREEN® Specific IgG food screen plates and reagents for patients and healthcare professionals.

Good Morning sir ,

My name is **Prateek** from **Cell Cure Diagnostics** . We offer unique diagnostic test which analyses the root cause of Chronic diseases and symptoms. I want to express my sincere interest in discussing the latest Diagnostic Test and solutions within our product portfolio, which I believe could significantly benefit your patients.

We have 6 different unique diagnostic German product . All the tests are done in Germany .

- ImuPro
- Gut Micobiome
- NeuroSpot
- Metacheck
- Histamine

As you know Chronic Inflammation is a silent killer so we work on Chronic Inflammation which can cause many chronic diseases .

We have a lot of celebrity client who got this test done and get a relief from many symptoms like long acidity issue , Migraine , Blood Sugar Control , Psoriasis , Urtica problems.

We take pride in offering innovative and high-quality solutions to healthcare professionals like yourself.

I am eager to share information about all diagnostic test and how it has demonstrated success in improving patient outcomes in similar practices. Our team also understands the importance of staying updated on the latest developments in the medical field, and we believe that a brief meeting with you could be mutually beneficial.

I would be delighted to arrange a convenient time to meet with you, either in person or virtually, to provide more detailed information about our offerings and to address any questions or concerns you may have. Your insights and expertise are highly valued, and we believe your consideration of our products could contribute to enhancing patient care in your practice.

Please let me know your availability, I appreciate your time and consideration and look forward to the opportunity to discuss how our solutions align with your practice's goals.

Thank you
